

# What is my body telling me?

## Survey: Food & Environmental Sensitivities

*Below are common signs and symptoms of food or environmental intolerances. These intolerances affect your body's ability to function and can contribute to adrenal fatigue.*

They may or may not show up on allergy tests, but if you have many of these signs and symptoms, your body is likely reacting to one or more substances you are eating, drinking or have been exposed to. Note that the signs and symptoms listed below have more than one cause, and any single sign or symptom is not a direct indication of a food or environmental intolerance. Taken as a group, however, they are very useful indicators of hidden problems affecting your metabolism, and possibly your adrenals.

**Check all items that you presently experience:**

### Physical Symptoms

#### Head

- Headaches
- Faintness
- Dizziness
- Feeling of fullness in the head
- Excessive drowsiness or sleepiness soon after eating
- Insomnia

#### Eyes, Ears, Nose & Throat

## Survey: Food & Environmental Sensitivities

Check all items that you presently experience:

### Psychological Symptoms

- Anxiety attacks
- Depression
- Cravings
- Aggressive behavior
- Irritability
- Mental dullness
- Mental lethargy
- Confusion
- Excessive daydreaming
- Hyperactivity
- Restlessness
- Learning disabilities
- Poor work habits
- Slurred speech
- Stuttering
- Inability to concentrate
- Indifference
- Cloudy or foggy thinking

If you have **more than 8** of the items checked, you likely have food and/or environmental sensitivities that are interfering with your metabolism.

Food and environmental intolerances can wreak havoc on many bodily systems. They create inflammation, irritate digestion and absorption, down regulate thyroid function, increase weight and food cravings, and more. They literally can play into just about any symptom you can think of.

If you score high on this survey go to the section under **thyroid solutions** in the “Top Ten Lab Tests and Solutions” to see a diet that will effectively and easily help you discover what foods you are reacting to and support you in experiencing just how well and good your body can actually feel.
